

Study Program: GEOGRAPHY			
Type and level of studies: Bachelor studies			
Course name: TOURISM AND SPACE			
Lecturer: Danijela Vukoičić			
Status: Elective subject			
ECTS: 6			
Attendance prerequisites:			
Course aims			
<p>The development of tourism in one area can be observed from several aspects and bring different effects. Tourism changes and transforms space, seeks its own spatial organization, introduces many stimulating, but also perturbation factors in the development of an area. The effect of tourism on the transformation of space is a recent phenomenon, related to the mass development of tourism. The aim of this course is to acquaint students with a set of issues relevant to the introduction, planning and management of tourist space, as a subsystem of geospace. According to the established goals and the concept of tourist development of a certain area, its specifics and its identity, specific spatial, urban plans or master plans are made based on which the tourist space is arranged. The lectures aim to explain both the role of these plans and the instruments used for the arrangement of tourist areas. The role of programs and programming of arranging tourist areas, which precedes investments in the realization of tourist projects and the impact of planned activities on the economic, ecological and social dimension of development, will also be elaborated on. During practical classes, the students practice organizing tourist places or wider areas with different levels of plans and programs.</p>			
Course outcome
